

Holds together securely – the new DIRAK Over
Center Toggle Latch made of Polyamide

LAUNCH

01 Requirements

An exciting solution

Over center toggle latches are used in many different applications. For example, if a transport crate or machine housing needs to be closed, functionality is normally the number one priority. But simply closing is not enough nowadays. Design and the cost factor are increasingly coming into play.

The new DIRAK Over Center Toggle Latch made of polyamide reliably and securely latches flaps and covers. Due to the properties of the materials, the latch is suitable for both indoor and outdoor use. In addition to its elegant design, the Over Center Toggle Latch made of polyamide is an attractive solution in terms of price.

Julia Hückinghaus Marketing Assistant

02 Product advantages

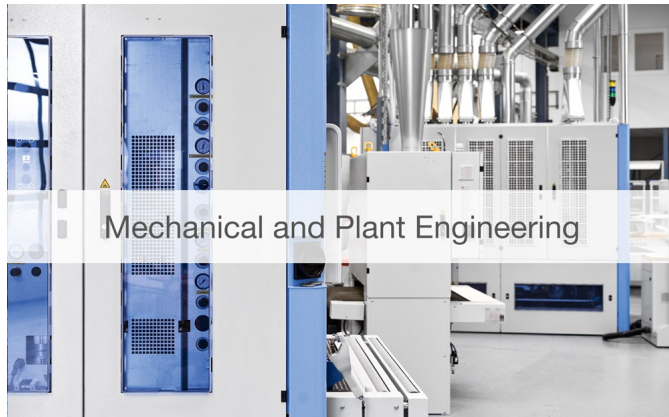

5 good reasons that make the new Over Center Toggle Latch made of Polyamide so interesting:

1. tool-less installation.
2. corrosion resistant.
3. suitable for outdoor use.
4. rounded, inconspicuous design.
5. cost-effective.

As the tensioning mechanism closes, a dead point is passed, which causes the Over Center Toggle Latch to lock securely in the closed state. The effect of the lever ensures that a lot of holding force can be achieved with just a little manual force.

03 Application areas

The new DIRAK Over Center Toggle Latch made of Polyamid can be used for different applications

Mechanical and Plant Engineering

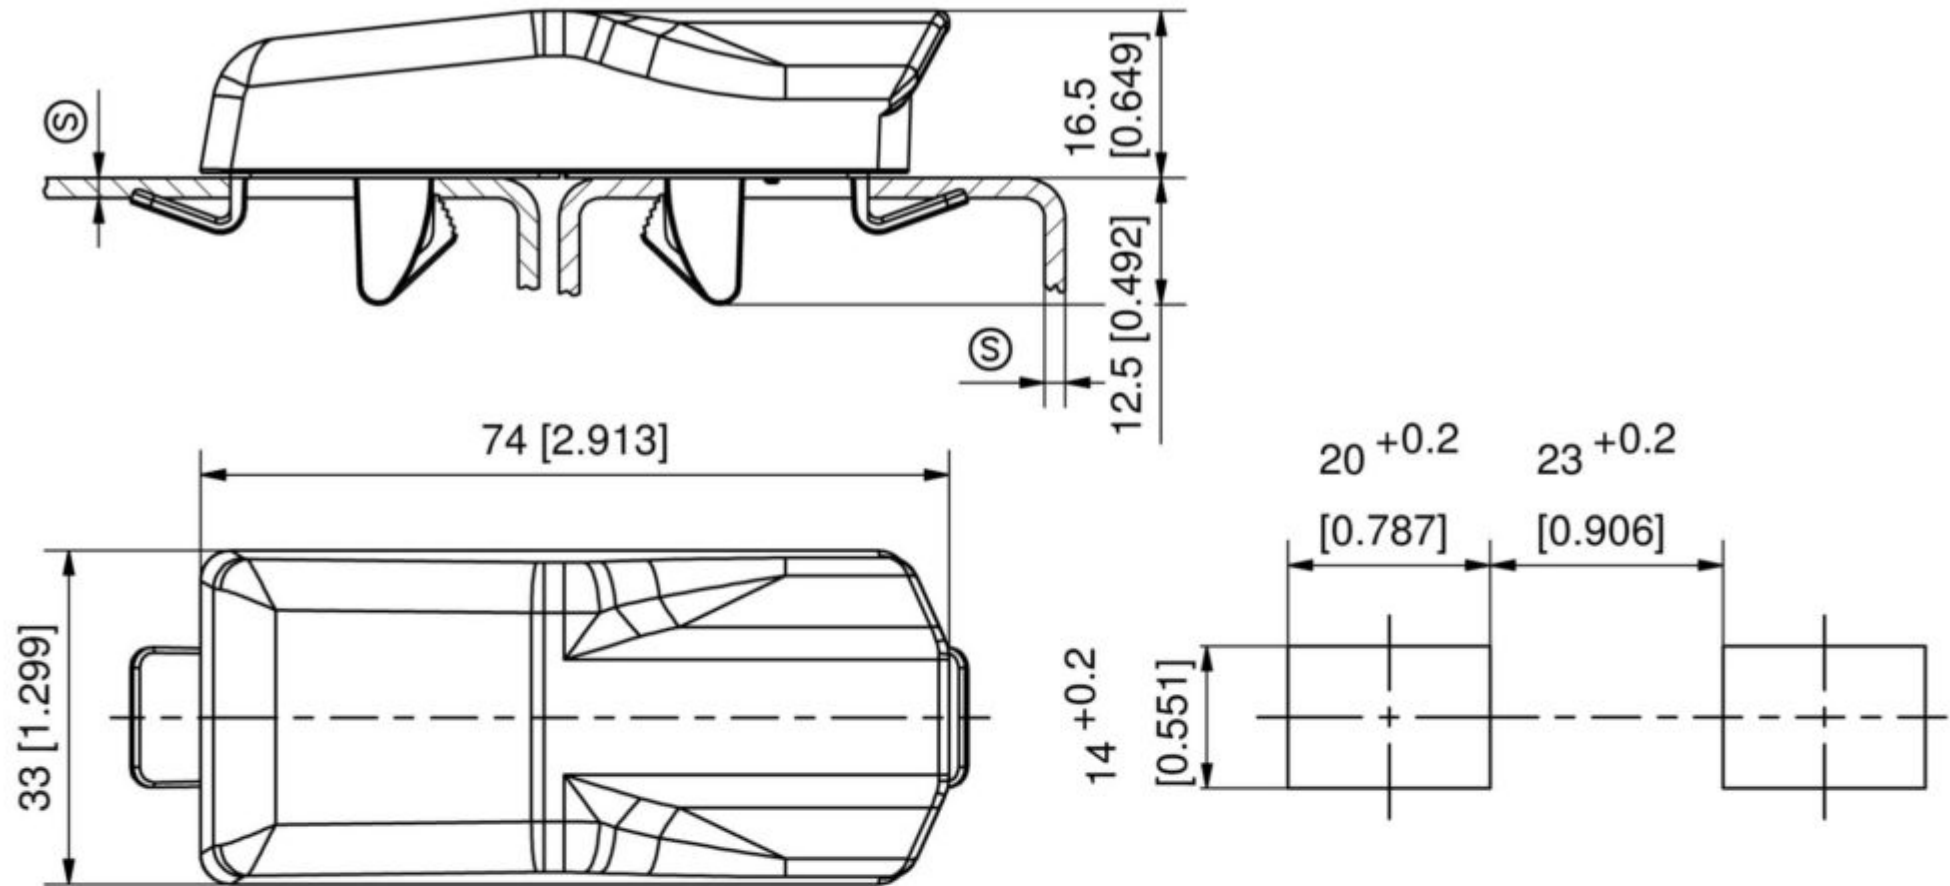

Sheet-metal fabrication

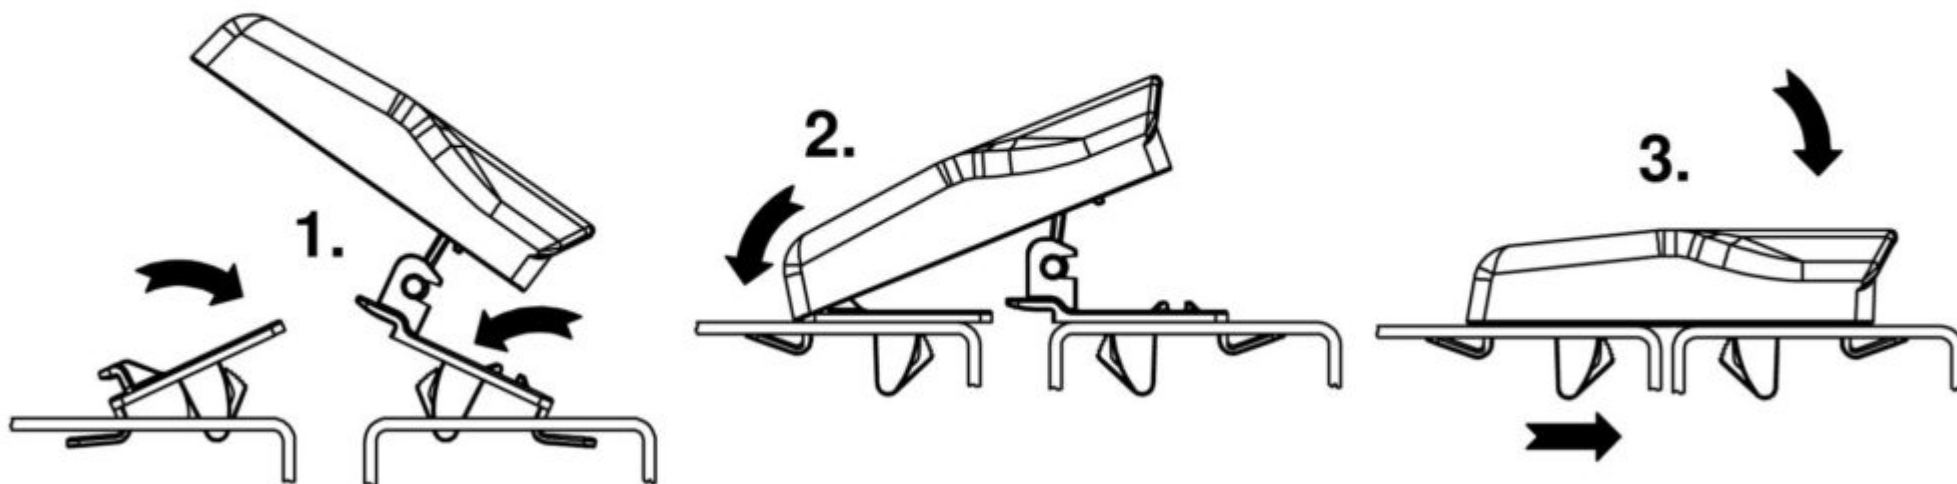

Interested?

We would be happy to become familiar with your application as well and find a solution that is tailor-made to meet your requirements.

04 Dimensions

Material

Over center toggle latch, catch hook: PA, black

Comments:

1. guide the closing hook and the latch under the door panel and clip them in place.
2. hook the latch into the closing hook.
3. press the latch down and tighten it.
